FOR IMMEDIATE RELEASE

Test Spectrum Experiences Record Growth

Austin, TX – July, 2001 – Test Spectrum today announced that revenue growth for the fiscal year 2000 represented a 412% increase from 1999 sales levels. 2000 sales were just under \$2.0 million in Test Spectrum's second year of operation. Through June of 2001, sales are \$1.75 million, just below full year 2000. Despite a slowdown in the semiconductor market, the company has forecasted sales in its third year exceeding \$3.50 million. Todd Turner, President of Test Spectrum explains that, "Despite the retrenchment within the semiconductor market, our company continues to grow. We attribute this growth to the fact that contracted software and hardware services will save companies money in both good times and bad. Right now, Integrated Device Manufacturers (IDMs), as well as fabless companies, are extremely cost conscious. They realize that using a company like Test Spectrum allows them to get high quality test development services without having to add staff or fixed costs. Also, many companies are using the downturn to increase new product introductions, which also helps our company secure new contracts." Test Spectrum has continued to hire engineers in 2001, and they have gained 5 new customers in the last quarter alone.

Established in June, 1999, Test Spectrum Inc. serves the semiconductor industry by creating test software and hardware design solutions for the Automated Test Equipment
