FOR IMMEDIATE RELEASE

Test Spectrum Offers Test Software and Hardware Development Services

Austin, TX – Semicon West, 2001 –Established in June, 1999, Test Spectrum Inc. serves the semiconductor industry by creating test software and hardware design solutions for the Automated Test Equipment (ATE) market space. With over 120 years of integrated circuit (IC) test development experience, Test Spectrum specializes in mixed signal and high-end digital test solutions. Test Spectrum's software products include; new product test programs, characterization programs, test program optimization and platform conversion, and custom software applications. The company also provides turnkey test hardware including the design, fabrication and assembly of loadboards, DUT cards, and probe cards. The company's focus is creating cost effective, turnkey technical solutions for both outsourced and captive test software and hardware needs within the semiconductor marketplace.

The company is capable of developing and managing an entire test project or working on specialized aspects of current and ongoing projects depending on a customer's needs. Test Spectrum's President and Co-Founder Todd Turner explains: "We have found that customer needs vary greatly within test software and hardware development. A Fabless company may have limited resources for test software development

and our company is capable of working with their design engineers to provide a total solution. On the other hand, Integrated Device Manufacturers (IDMs) may have a staff that develops software in-house, but because of time constraints for a new product, the IDM needs Test Spectrum to help on certain portions of that development. Because we are an outsourced option, we can serve both of these customers successfully."

Test Spectrum is headquartered in Austin, TX and supports customers worldwide. Visit their website at www.testspectrum.com.
